

THE PRACTICAL KITCHEN PLANNER

Move the sink? Move the hob?

Map the services. Compare two plans. Sign off once.

Plan the sink, hob, chimney, gas and power points together.

MAP / COMPARE / APPROVE

A free guide for Gandhinagar homes. Use it before cabinets and the worktop are ordered.

7 pages. Made to read, write on and share.

01 / MAP THE KITCHEN

Mark what exists. Then test the idea.

A cabinet plan is not ready while service points are still moving.

DRAW A SIMPLE TOP VIEW

Mark the sink, drain, water taps, gas point, chimney outlet, sockets, window and door. Add each appliance.

Current sink and drain:

Current hob and gas point:

Chimney route or wall opening:

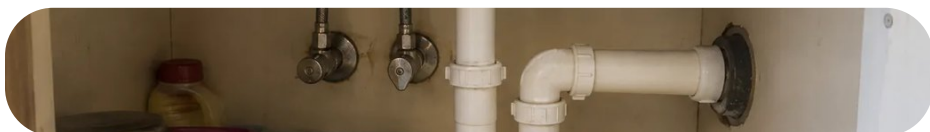

Fridge, purifier and other appliances:

Check society or building rules before drilling, duct or service work.
Keep builder repair work separate from your new layout.

02 / SINK MOVE

Water in. Waste out.

The plumber must check both paths and keep the joins reachable.

Keep valves, the drain trap and pipe joins easy to inspect.

01 Choose the sink first

Record the model, bowl size, cut-out and minimum cabinet size. Use the maker's instructions.

02 Plan nearby items

Add a purifier or dishwasher water, waste and power point before the cabinet drawing is final.

TEST, THEN WRITE THE ROUTE

Ask the plumber to test every new joint before panels close.

Water point: ____ Waste outlet: ____

Sink model: ____ Base cabinet: ____

Trap and valves reachable: yes / no

03 / HOB AND CHIMNEY

Approved gas point. Clear chimney path.

The cabinet team should not change a PNG line on its own.

PNG CHECK

Ask Sabarmati Gas or its authorised person what change is allowed. Keep the shut-off and approved connection easy to reach.

CHIMNEY AND CUT-OUT CHECK

Match the chimney to the hob. Follow the exact guide for height, duct and outlet. Use the hob model for the worktop cut-out, not a photo or rough size.

Hob model, cut-out and PNG check:

Chimney model, route and outlet:

Faber gives a general 24-30 inch chimney height. Your exact hob and chimney guides decide the final setting.

04 / APPLIANCES AND POWER

Open each door. Reach each point.

A fitting can look neat and still be hard to use or repair.

APPLIANCE NOTES

Fridge: ____ Dishwasher: ____ Oven: ____
Purifier: ____ Other: ____

Door and walking space

Open the fridge, drawers and shutters on the plan. Check the main path, handles and appliance clearances.

Power, service and the right trade

Keep safe, reachable power points. Use the plumber for water and drain, the gas provider or authorised installer for PNG, the electrician for power and the carpenter for the cabinet fit.

A useful site question: Can this appliance be removed for repair without opening or breaking the cabinet?

05 / TWO PLANS

Keep the points? Or move the points?

Compare the extra work and benefit, not only the cabinet price.

PLAN A / KEEP THE MAIN POINTS

Cabinet and appliance fit: ____

Useful change gained: ____

Work and checks still needed: ____

PLAN B / MOVE A SINK OR HOB

New service work: ____

Wall or worktop repair: ____

Extra tests and visits: ____

Compare work first. Ask for the written price after checks.

FINAL SITE SIGN-OFF

Plumber and PNG checks:

Electrician and chimney checks:

Cabinet drawing and date:

KEEP / SAVE / SHARE

Use it at site. Pass it on.
